

Applying Bloom's Taxonomy to ToK PT#1 Nov 19

1. Knowledge Claim: The user of knowledge has greater responsibility than the producer of that knowledge.

	Level of thinking	Question(s)
	Creation¹	a) Which is more important: Moral Justification, Reliability or Validity ? b) Devise criteria that a person could use to ensure high standards in the production & use of knowledge in respect to your answer to part a)
	Evaluation	Are the arguments stronger for either side if we look at solely personal knowledge or solely shared knowledge ? What are the arguments for morality constraining creativity ? (& vice versa).
	Synthesis	Are user and producer necessarily separate ? "Responsibility" for what ? What would a criteria of responsibility look like ?
	Analysis	What factors, or causes, determine the attribution of responsibility ? Does the person responsible change if the type of responsibility (eg moral, reliable, valid etc) changes ?
	Application	Could this claim be used to justify censorship ? If so, how ? Is the distinction between producer & user of knowledge the same in all AoKs ? Are responsibilities more Personal or more Shared Knowledge phenomena ?
	Comprehension & Knowledge	Is there a distinction between the User & the Producer of knowledge ? What is meant by 'responsibility' ? Describe an example where you think the responsibility lies with the producer of the knowledge, and an example in which you think the responsibility lies with the user of the knowledge, and example in which it is both / neither.
